Frisch-Waugh-Lovell (FWL) experiment: BLOCKED

FINAL_V1 experiment group summary

Protocol FINAL_V1 Status: **BLOCKED** Generated: 2026-10-20T11:51:05Z

Status

- BLOCKED: PROTOCOL_DECISION_REQUIRED. The execution prompt requires the scientific purpose, response, nuisance covariates, residualization procedure, statistic and stopping rule to be frozen before use.
- No FINAL_V1 protocol was supplied and none of these items was defined by the project owner; the agent did not improvise an FWL algorithm.
- No FWL result exists in this study and none is implied. The registry carries one row (FV1-FWL) with status BLOCKED.

What is needed to unblock

- A written definition of: purpose (for example removing the linear effect of recording-condition variables from the features), the response variable, the nuisance covariates and how they are measured, whether residualization is fitted inside each training partition only, the reported statistic, and a stopping rule.
- Because this changes the frozen protocol, it must be approved and recorded as an amendment; amended runs must not be described as following the original specification.
